Thanks for your help! Biochar is just charcoal, produced by burning organic matter such as wood, grasses, crop residues and manure, under conditions of low oxygen pyrolysis. Thanks for the idea of ducks for the beetles that produce the ginormous grubs I have...

Mymoosemanurehuntingisgoingquitewellevensawoneofthosebigpooperand C:N ration is around From what I am reading the amount of water used will probably be the same since it would still have a distance to travel. Most nitrogen-rich materials contain a lot of water, and therefore very little carbon as a percentage of their weight.
